### Tri-fucosyl-Le<sup>Y</sup>-heptasaccharide-APE-HSA

The oligosaccharide is linked to HSA lysine residues via a spacer using the isothiocyanate coupling method. The spacer used is *p*-aminophenylethyl (APE). The spacer is glycosidically linked to the reducing monosaccharide unit of the oligosaccharide.

The conjugate normally contains 10-20 moles oligosaccharide per mole HSA.

The conjugate is supplied as freeze dried powder. Storage: -18° C.
